2010/11 QUARTER THREE RESULTS

How to read the graphs

Shorter stays in Emergency Departments

The target is 95 percent of patients will be admitted, discharged, or transferred from an Emergency Department (ED) within six hours. The target is a measure of the efficiency of flow of acute (urgent) patients through public hospitals, and home again.

Shorter waits for cancer treatment

The target is everyone needing radiation treatment will have this within four weeks by January 2011. Six regional oncology centres provide radiation oncology services. These centres are in Auckland, Hamilton, Palmerston North, Wellington, Christchurch and Dunedin.

The change from previous quarter has been calculated using quarter two four-week waiting times. All DHBs have met the previous six-week target. Both results are displayed above.

Better diabetes and cardiovascular services

This graph represents the average progress made by a DHB towards three target indicators:

- an increased percent of the eligible adult population will have had their cardiovascular disease risk assessed in the last five years;
- an increased percent of people with diabetes will attend free annual checks;
- an increased percent of people with diabetes will have satisfactory or better diabetes management.
